Forecast For Yorkshire & the Humber
Issued by Met Office Exeter
at 0400 on Sunday 14 Feb 2021

++ Valid for broadcast between 0600 and 1800

Headline:
Risk of ice as snow turns to rain. Becoming milder.

Today:
Perhaps fine but cold at first. Becoming increasingly cloudy and windy, with hazardous icy stretches possible as snow flurries and perhaps freezing rain very gradually turn to rain through the day, as milder air makes erratic inroads from the west. Maximum temperature 5 deg C (41 deg F).

Tonight:
Very gradually becoming milder from the west through the night, but tempered by rain and strong winds. Perhaps drier but rather cloudy and murky in western parts by dawn. Minimum temperature -1 deg C (30 deg F).

Monday:
Rain soon clearing east, leaving low cloud and fog that should slowly clear to sunny spells, in a milder day than of late. Perhaps turning cloudier in the north later. Maximum temperature 11 deg C (52 deg F).

Outlook for Tuesday to Thursday:
Remaining mostly mild, but changeable and often rather windy. Spells of rain are possible on all days, perhaps especially Thursday, but also some drier interludes and sunny spells.
